Key Findings

In the 40th anniversary year of the Education Finance Act of 1977 (EFA), this report takes a step toward re-evaluation of the state's school funding policies by examining the foundation education program and EFA base student cost from its inception in 1977 to the present day. An updated base student cost per pupil is estimated for 2015-16.

Education Finance Act of 1977

- EFA funds are an important source of revenue to local school districts, providing 37.8 percent of total state aid to school districts in 2015-16.
- Because of the law's equalizing funding formula, EFA funds are the only source of state aid that is designed to provide equalization in the distribution of that revenue between rich and poor districts.
- The share of state aid to school districts that flows through EFA is an indicator of how much funding equalization is occurring. EFA funds dropped from 58 percent of state aid to school districts in 1992-93 to 38 percent in 2015-16.
- Census data for 2014-15 ranked South Carolina 33rd among the 50 states in state aid per pupil, but in terms of the share of state aid that has a direct equalizing component, it was dead last, well below all other states, even after adjusting for inputs that are funded by other state aid, such as transportation costs and employee fringe benefits. The average state distributed 69.3% of its aid through an equalizing formula.
- A significant share of state aid to school districts in South Carolina now comes in the form of property tax relief, which is not equalizing and in some cases is actually disequalizing.

Components of Base Student Cost

- Thirty-seven states have foundation education programs. Foundation education programs provide funding for staff and services to support a defined minimum education program.
- Base student cost is the funding level necessary for providing a foundation education program to the average student—one who does not require any special or additional curriculum or services.
- Educational researchers and consultants use four methods to estimate base student cost. They are successful schools (per pupil spending in schools that are doing well); professional judgment (identifying resource inputs needed to meet state and federal standards); evidence based research, and statistical analysis.
- Professional judgment is the method used historically in South Carolina and in a number of other states. Professional judgement reviews of base student cost in other states usually employ external consultants working with large teams of in-state educators and other professionals. This project was accomplished with a small staff relying on prior state work and using data provide by the South Carolina Department of Education (SCDE).
- Other states periodically review the resource inputs to their state's foundation program and update their funding formulas to reflect both changed inputs and costs. South Carolina has not adopted any changes to the components of base student cost since it was first introduced in 1976.

- A SCDE-funded study in 2007 identified current resource inputs to the state's foundation program and estimated base student cost at \$7,270 per pupil. At that time, the inflation-adjusted estimate of base student cost provided to the General Assembly was \$2,484 per pupil, which was not fully funded.

Base Student Cost and Inflation

- Three measures of inflation can be used to adjust base student cost: the GDP deflator for the state and local government sectors, the Consumer Price Index, and the southeastern average of school employee salaries. The GDP deflator overstates inflation for this purpose because it includes capital costs, health insurance and transportation, neither of which are a part of the EFA funding package.
- The South Carolina Revenue and Fiscal Affairs Office uses a blend of the salary average for the share of costs attributed to salaries and the consumer price index for non-wage costs such as instructional materials, maintenance supplies, and technology.
- This study supports South Carolina's two combined measures of inflation for use on base student cost, but found that their weights were unbalanced relative to the current shares of spending on school wages and non-wage costs.

Pupil Weights and the Distribution of EFA Aid

- EFA funds are distributed to school districts based in part on weighted pupils, which makes adjustments for students who are more costly to educate. South Carolina recently adopted new add-on weights for personalized instruction and for pupils in poverty, with limited English proficiency, gifted and talented, or in dual enrollment.
- Some states now adjust for district-wide characteristics such as poverty and low population density. Many of South Carolina's poorer districts also suffer from higher costs for transportation and smaller school and class size because they are rural.

The EFA formula and Local Ability to Pay

- South Carolina uses the index of taxpaying ability, or the district's share of total state taxable property, to determine how much more (or less) than the state's average share of student cost (70 percent) goes to each district. However, the validity of that measure has been compromised by Act 388 of 2006 in terms of homeowner property.
- The index of taxpaying ability is complex to compute and difficult to explain. A number of states use a more transparent measure, such as the per pupil yield of a mill.

An Updated Base Student Cost for 2015-6

- An updated base student cost can be estimated for South Carolina given three kinds of information: 1) a generally-accepted set of resource inputs for a current defined adequacy program for a prototypical school district office and prototypical elementary, middle and high schools; 2) detailed salary and expenditure data from the SDE, and 3) access to other states' estimates of the cost of various resource inputs from recent professional judgment panels and evidence-based studies.
- After carefully estimating the cost of each category of input (with details spelled out in the body of the report) this report's best estimate of an updated base student cost for South Carolina is \$6,561 for 2015-16.

An Updated Base Student Cost and School Finance Adequacy and Equity

- An updated EFA base student cost that makes up a larger share of total state revenue to school districts would improve both adequacy and equity in state funding among districts with widely differing abilities to raise revenue from their local property tax bases.
- Thirty-four mostly poor and rural school districts were original plaintiffs in the long-running school funding adequacy case in South Carolina, *Abbeville County School District, et al. v. State of South Carolina, et al.* Twenty-three of these 34 districts would be in the top third of districts receiving the largest dollar increases in state EFA funding per (unweighted) pupil if base student cost had been increased from its funded level of \$2,197 per weighted pupil to this report's \$6,561 per weighted pupil in 2015-16.
- Stated another way, 23 of the original *Abbeville* plaintiff districts would comprise 85 percent of the 27 districts in the top third of districts receiving the largest dollar increases in state EFA funding per (unweighted) pupil in the 2015-16 example in this report.

Updating Base Student Cost

Introduction

In 1977, the South Carolina General Assembly passed the Education Finance Act (EFA), creating for South Carolina an education funding mechanism that was similar to those used in many other states. This method of calculating part or all of state aid based on a formula is called a *foundation program*.

At the core of EFA is the concept of base student cost, as it is in the other 37 states that have similar funding programs, and nine others that employ aspects of a foundation program (Verstegen, 2015). Defined generally, base student cost is the cost of providing an adequate education to the average student—one who does not require any special or additional curriculum or services.

The purpose of the EFA was to offer state funding to school districts on a 70-30 matching basis that would be sufficient to provide the resources needed to meet the standards of a clearly defined foundation program. EFA was also intended to offer some equalization between richer and poorer districts to ensure an adequate education to all students by varying the required local match based on the district's tax capacity.

Many states, including South Carolina, have faced court challenges to the adequacy and equity of state funding for preK-12 education in the last two decades. These challenges have forced states to reconsider their education funding mechanisms and how they might be revised or replaced in the light of those court challenges. With the *Abbeville County School District v. State of South Carolina* case still to be fully resolved and possible revisions to Act 388 of 2006 under consideration, this is an opportune moment to revisit EFA, which is one of South Carolina's primary educational revenue streams flowing from the state to local school districts. Two of the three components of the EFA formula—base student cost and the index of taxpaying ability—are overdue for re-examination. The remainder of this report focuses on South Carolina's base student cost

In the 40th anniversary year of the Education Finance Act, this report takes a step toward re-evaluation of the state's school funding policies by assessing base student cost from its inception in 1977 to the present day. The report is organized as follows. First, the role of the EFA in state education funding is briefly reviewed, including state funding streams, EFA base student cost and pupil weights, and the EFA funding formula. Second, the relationship of EFA base student cost to South Carolina's 1975 defined minimum foundation program is examined. Third, we review a 2007 effort to update the state's foundation program and base student cost. Fourth, we describe the growth in South Carolina's base student cost and assess the validity of the inflation factors used. Fifth, using a variety of cost estimation techniques, we calculate an updated base student cost for the state. Finally, we estimate how EFA state funding and local required support would have changed in 2015-16 based on the updated base student cost. This research was funded by the South Carolina Department of Education.

The Role of the Education Finance Act in State Education Funding

This section reviews the role of the EFA in state education funding in South Carolina, including funding trends, the EFA funding formula and the role of pupil weights, and the division of funding responsibility between the state and local school districts.

State Funding Streams

EFA is an important component of state support for public education in South Carolina, and the primary funding stream that addresses both funding adequacy per pupil and funding equalization among school districts (Table 1). The EFA addresses the adequacy of the state's public school program by directly linking dollars of state appropriations and local funding to minimum school staffing levels and programs. The EFA addresses equity among school districts by sending more funds per student to districts with limited tax capacity and less to districts with more tax capacity. EFA is at the heart of South Carolina's foundation program because EFA appropriations are distributed to schools on a formula basis.

Table 1. State Aid to South Carolina School Districts, selected years

State Revenue	1993	1996	2002	2008	2011	2016
<i>Millions of dollars</i>						
Property tax relief - \$100K residential	\$0.0	\$205.3	\$244.1	\$249.1	\$249.1	\$255.0
Homestead exemption (elderly & disabled)	\$0.0	\$18.5	\$65.5	\$99.7	\$100.7	\$106.2
Property tax relief - remaining resid.	\$0.0	\$0.0	\$0.0	\$565.0	\$628.2	\$674.2
State grants and miscellaneous	\$329.3	\$360.0	\$886.8	\$752.8	\$820.2	\$985.1
Education Finance Act (EFA)	\$803.0	\$892.5	\$1,088.8	\$1,525.9	\$1,035.0	\$1,526.6
Education Improvement Act (EIA)	\$248.4	\$342.4	\$476.6	\$579.8	\$432.7	\$426.5
Education Lottery	\$0.0	\$0.0	\$0.0	\$48.6	\$42.7	\$43.3
Total revenues from state sources	\$1,380.7	\$1,818.7	\$2,761.8	\$3,820.8	\$3,308.7	\$4,016.9
<i>Percent of total</i>						
Property tax relief - \$100K residential	0.0%	11.3%	8.8%	6.5%	7.5%	6.3%
Homestead exemption (elderly & disabled)	0.0%	1.0%	2.4%	2.6%	3.0%	2.6%
Property tax relief - remaining resid.	0.0%	0.0%	0.0%	14.8%	19.0%	16.8%
State grants and miscellaneous	23.9%	19.8%	32.1%	19.7%	24.8%	24.5%
Education Finance Act (EFA)	58.2%	49.1%	39.4%	39.9%	31.3%	38.0%
Education Improvement Act (EIA)	18.0%	18.8%	17.3%	15.2%	13.1%	10.6%
Education Lottery	0.0%	0.0%	0.0%	1.3%	1.3%	1.1%
Total revenues from state sources	100.0%	100.0%	100.0%	100.0%	100.0%	100.0%

SC Dept. of Administration, Revenue and Fiscal Affairs Office, *Local Government Finance Report FY16*

Other state revenue streams provide some limited funding equalization. The 1984 Education Improvement Act (EIA) sends the same amount per pupil to districts to support specific programs. State grants, which are principally for transportation and employee fringe benefits, cover approved costs. The South Carolina Education Lottery also provides some funding for public schools, but most lottery revenue collected is used for scholarships for higher education.

Another, and now major source of state aid to school districts is property tax relief for homeowners. Tax relief tends to be disequalizing because tax relief payments (reimbursements) to districts are based on the value of owner-occupied residences in 2006, adjusted for inflation rather than changes in the value

of the tax base. More populous and higher income districts generally have more highly valued residential property. While the property is removed from the actual tax base, it has no effect on the EFA's index of taxing ability because an imputed value of property (based on the amount of property tax relief) is entered to offset that change.

Taken all together, when EFA is a larger share of state aid, there is more funding equalization among than when state aid is shifted to other payment streams. Figure 1 shows the changing composition of state aid to education since 1992-93. Early in this period, the EFA, EIA and state grants were the only sources of state funds to school districts. Since then, the share of EFA funds in total state revenues to schools declined from 58 percent in 1992-93 to 38 percent in 2015-16. To the extent that funding for property tax relief, part of which comes from the state's General Fund, has partially displaced EFA funding, this change represents a shift of funds from poorer to richer districts. The disequalizing effect of state homeowner property tax relief is compounded by the fact that much of the tax relief was funded by an increase in sales tax, which falls more heavily on lower income residents.

Figure 1. State aid to SC school districts, 1992-93 to 2015-16

Education finance data collected by the U.S. Census Bureau (2009, 2017) provides some insight into how South Carolina ranks in foundation funding levels relative to other states (Table 2). These data are not directly comparable to the figures in Table 1 above because detailed information on the funding streams that the Census Bureau classifies as “general formula assistance” is not readily available. Nevertheless, they are revealing in comparison to other states.

Census data revealed that South Carolina ranked 33rd of the 50 states in total state aid per pupil in 2014-15 but channeled the smallest share of any state of its aid through “general formula assistance,” which is commonly designed to favor poorer districts (those with less ability to raise funds locally). The

data showed that formula-based state aid to schools in South Carolina was only 20.8 percent of the total, compared to a U.S. average of 69.3 percent. Only two other states, Connecticut (35.0%) and Nevada (37.3%) distributed less than 40 percent of their aid on a formula basis in 2014-15 (U.S. Census Bureau, 2017). In 2006-07, the last year before expanded property tax relief for homeowners changed the balance of state and local funding to schools in South Carolina, the state's share of formula assistance was higher, at 29.1 percent of total state aid.

In part, South Carolina's low percentage likely reflects the fact that most other states appear to include fringe benefits in base student cost, while South Carolina funds this item separately. There are good reasons for funding fringe benefits separately. Doing so reduces the required local match for districts and treats school employees as state employees for purposes of health insurance and retirement.

Table 2. State Aid and Formula Assistance, State Ranks

	South Carolina		United States Average	
	2006-07	2014-15	2006-07	2014-15
Formula assistance (% of state aid)	29.1%	20.8%	66.8%	69.3%
State rank: formula assistance	51*	50	n.a.	n.a.
State aid per pupil	\$4,448	\$5,553	\$5,466	\$6,238
State rank: state aid per pupil	37	33	n.a.	n.a.

*District of Columbia included.

Base Student Cost and Pupil Weights

Base student cost is an estimate of the cost of the resources needed to educate the average student to a certain standard. The EFA funding formula translates that figure into dollars per pupil at the school district level.

Starting with base student cost and the number of students per district,¹ the EFA formula incorporates two important qualifications that result in offering more aid per student to some districts than to others. One modification is an adjusted student count, which makes allowance for differences in the composition of the student population and its educational requirements across districts. In South Carolina, the adjusted student count is called weighted pupil units.

Like other states, South Carolina adds weights for students who are more expensive to educate, such as special education, blind, disabled, gifted and talented, or career and technology students. For example, if the average student with no special needs or required extra expenditures has a weight of one (1.0), a student in a career and technology curriculum might have an additional weight of .29 based on the additional cost of educating that student. In practice the number of career and technology students in a district's student population would be multiplied by 1.29.

The South Carolina legislature revised the EFA's original pupil weights a few years ago. Through 2013-14, pupil weights were as specified in the 1977 act (Table 3). In 2014-15 the legislature amended the original EFA pupil weights using a budget proviso. The changes included treating all K-12 pupils including homebound pupils as the base pupil with a weighting of 1.0. Previously the EFA gave different weightings to pupils at different grade levels. The proviso also dropped a prior weight for adult

¹ The required pupil count is students in 135-day average daily membership (ADM).

education pupils but added some weights for additional instruction for pupils in poverty, pupils with limited English proficiency, pupils who are gifted and talented, or those in dual enrollment (Table 4).

*Weight of base student.

Source: SC Code of Laws, Section 59-20-40(1)

The five additional weights for personalized instruction may be added onto the other weights. So far, no local funding match has been required for these weights. In 2015-16 these add-on weights added nearly 85,000 WPU to the total (SCDE, 135-day pupil counts). Additional state funding was allocated to appropriated base student cost to accommodate these additional WPUs.

Some other states, including Kentucky, Utah and Maryland, now also adjust for district-wide characteristics such as a high incidence of poverty and low concentrations of student population (sparsity) that affect the cost of education (Verstegen, 2014, 2015). Sparsity is associated with both higher transportation costs and lower average school and class size. South Carolina recently added poverty as a weight in the EFA funding formula, but this weight is attached to the pupil rather than the district. South Carolina has no district-wide weights.

Table 4. EFA Pupil Weights since 2014-15

e. Dual Credit Enrollment	0.15

*Weight of base student. Source: SC House, Ways and Means Committee, 2017-18 General Appropriations Bill (H.3720).

The EFA Funding Formula and the State-Local Division of Financial Responsibility

Base student cost multiplied by the adjusted, or weighted, pupil count is the amount of combined state and local funds needed to fulfill the requirements of the EFA. This amount is also referred to as the EFA's foundation program. In 2015-16, \$1,549 million in state revenues were appropriated for the state's share of the EFA foundation program in regular school districts. This was matched by approximately \$664 million in local revenues.

For the average school district, 70 percent of that EFA required amount is supposed to be provided by the state. The other 30 percent of the EFA required amount is to be raised locally by the district from the property tax. Most districts receive more or less than 70 percent from the state based on how their ability to pay (i.e., to raise local property tax revenue) compares with the state average.

Calculating the total cost for EFA foundation program

Total EFA foundation program = (State WPU) * (Funded BSC)

Total state funding share = (Total EFA foundation program) * (0.7)

Total local funding share = (Total EFA foundation program) * (0.3)

School districts' ability to pay is determined annually through the index of taxpaying ability. The ITA for any given school district is the assessed value of total taxable property in the district divided by total taxable property in the state.

Single-county school districts in large, populous counties have the largest ITAs. For example, the Charleston County School District's ITA was 0.14190 in 2015-16. That value indicates that 14.19 percent of the assessed property value in the state was in Charleston County in that year. Charleston County has lots of residents, businesses and industry. Property values in Charleston County also benefit from proximity to the Atlantic coast and historic downtown attractions. The school districts in Beaufort (.07702), Greenville (.09307) and Horry (.08934) counties also have relatively large ITAs. The tax bases in Beaufort and Horry Counties get a big boost from non-owner-occupied coastal properties, while Greenville County is the most populous in the state and also has a high concentration of commercial and industrial property.

At the other end of the spectrum, small, poor rural school districts with fewer residents and less business and industry have much smaller ITAs. For example, the school districts in Abbeville (.00266), Allendale (.00114) and Calhoun (.0037) counties all have very small ITAs because their property tax base is valued at less than one percent of the assessed property value in the state. The SC Department of Revenue posts annual school district ITAs on the local government section of its website.² Because the financial responsibility for funding the EFA's foundation program is based on a district's ability to raise property tax revenue from its tax base, a district with a larger ITA will receive a smaller share of state funds per pupil than a district with a smaller ITA.

Calculating a District's Local Contribution to the EFA Foundation Program

Local Required Effort = (EFA total local funding share) * (District ITA)

State allocation to district = ((District WPU) * (BSC)) - Local Required Effort

The EFA's 70-30 division of funding responsibility for schools implies more equalization than actually occurs today. Distribution of state funds to school districts through property tax relief reimbursements has been a growing component of state revenue to education since Act 388 was implemented in 2007-08. This aid is not distributed on the basis of student enrollment or ability to pay, both of which figure heavily into EFA's equity-based funding formula.

According to data compiled by the SC Revenue and Fiscal Affairs Office (2017), EFA appropriations provided 38.0 percent of total state aid to education in 2015-16 (Table 1). In 2006-07, the year before implementation of Act 388 caused a sharp increase in state funding to schools for homeowner property tax reimbursement, EFA provided 47.2 percent of state funding to schools.

Different states use different methods to determine the distribution of foundation aid across districts based on local ability to pay. Increasingly, states are using a standard minimum property millage as the measure of the local match. Some states, such as Alabama, simply use the yield of a mill, while others such as Iowa and Montana require a uniform local levy in mills. Several states use more than one indicator. New Jersey and Ohio use both the property tax base and personal income, while Tennessee and Texas (two states with no state income tax) use sales as well as value of taxable property. The attraction of the yield of a mill or a specific number of mills is that it is simpler and easier to compute and is not affected by changes in property tax relief programs (Verstegen, 2015).

South Carolina's index of taxpaying ability, which measures the district's share of the total state property tax base, is complicated to compute and explain to the average taxpayer. Fee in lieu of

² <https://dor.sc.gov/lgs/reports-school-index>.

property tax agreements granted to industry, state-funded property tax relief, and a classified assessment system that assesses different types of property at different percentages of their market value all contribute to making the ITA not only challenging to compute but also a rather inaccurate measure of a district's ability to raise property tax revenues to pay for schools.

South Carolina's Defined Program and Base Student Cost

South Carolina's foundation program and base student cost were developed in the 1970s, when states around the country were struggling to address both school funding equity and adequacy after school desegregation in the 1960s (Flanigan and Richardson 1992). EFA's funding formula is the law's central element for equity. Base student cost is at the law's center for adequacy. Thirty-seven states used a foundation program approach to funding some or all of public education in 2014-15 (Verstegen 2015).

Resource Inputs for Base Student Cost

Most states identify the necessary resource inputs for a foundation program—and their costs per pupil—in consultation with education professionals from within the state and elsewhere. There are four methods that states use to construct their foundation programs: successful schools, professional judgement, evidence-based research, and statistical analysis (Verstegen 2006; Silverstein et al. 2007).

- **Successful schools:** This approach looks at current per pupil spending levels in schools that are successfully preparing students to meet adopted assessment standards. It is a useful method for evaluating how well schools are performing at current resource levels. It can also provide a baseline spending per pupil for states planning for future resources needed to address changing state or federal performance standards.
- **Professional judgement:** In this approach, teams of educators and others identify the resource and service needs of hypothetical schools and districts required to ensure that students are provided an adequate education under the law. Costs for elementary, middle, and high schools are combined with district-level costs to produce an overall average base cost of educating an average student with no particular special needs. This method is useful for estimating the resources needed to ensure that schools perform well under future standards.
- **Evidence-based research:** This approach relies on empirical research results combined with professional judgement to determine the resource and service needs required to ensure that students meet certain performance objectives. For example, if evidence-based research confirms the positive impact of full day kindergarten for four-year-olds on their future success in school, it would be used to support inclusion of a full day 4K program in the state's foundation program.
- **Statistical analysis:** This approach adds additional information to the other three approaches for estimating the cost to adequately educate the basic student. It is used primarily to assess cost differences associated with district, rather than student, characteristics. Examples include districts and schools of different size, and regional cost differences, such as school cost profiles in major urban areas vs. rural locations.

Forty-odd years ago, South Carolina almost certainly used the professional judgement approach to identify the necessary resource inputs for an adequate education for the average student. Verstegen (2006, p. 208) illustrates the elements of the professional judgement approach in Figure 2.

Figure 2. Conceptual model for determining the cost of an adequate education using the professional judgement approach (adapted from Verstegen 2006, p. 208)

Base Student Cost and the Defined Minimum Program

In South Carolina, EFA base student cost is based on a concept called the *defined minimum program* (DMP). The defined minimum program predated the Education Finance Act and was slowly phased in beginning in 1975. The DMP identified the types and levels of resources that would ensure delivery of a “minimum education program” to students in every school district. Final standards that reflected adjustments made during the DMP’s multiyear implementation period were issued in 1986 (SCDE, 1986). Key elements of South Carolina’s original DMP are summarized in Table 5.

South Carolina’s 1970s-era DMP specified the minimum number and qualifications of personnel providing instruction and other services in school districts and elementary, middle and high schools. It also identified acceptable curricula and courses for the different grade levels in addition to vocational education and adult education. Today, the DMP is codified in S.C. Department of Education regulations.³ It has been updated to reflect some additional programs since required by state law, and the outdated list of courses is gone, but many of its original staff requirements and staffing ratios remain.

The EFA’s base student cost was, and remains, linked directly to the resource inputs and costs associated with the 1970s-era DMP. While the DMP specified minimum staffing levels and curriculum requirements, few explicit spending requirements were included. The EFA, however, put a dollar amount on the DMP. That amount was \$665 in 1976; that amount also was base student cost.

Base Student Cost was set at \$665 per pupil in 1976.

³ S.C. Dept. of Education Regulation No. 43-231 (Defined Program Grades K-5), Regulation No. 43-232 (Defined Program Grades 6-8), Regulation No. 43-234 (Defined Program Grades 9-12 and Graduation Requirements), and Regulation No. 43-229 (Defined Program for the Palmetto Unified School District).

Source: SC Dept. of Education, *Defined Minimum Program for South Carolina School Districts*, 1986

The EFA defines base student cost as

“Base student” means that student classification that represents the most economically educated pupil in the school system, those in grades four through eight in regular classroom settings. “Base student cost” is the funding level necessary for providing a minimum foundation program which includes the funding level necessary for supporting the **defined minimum program** [emphasis added] and to meet, as funds are available, needs identified by each district board of trustees’ annual report, which reflects the needs identified in the annual school reports of the district and other assessments, and which is calculated in 1976 dollars to be six hundred sixty-five. (S.C. Code, Section 59-20-20 (6))

EFA did not include all DMP resource inputs in base student cost, however. The original 1977 act specifies in broad terms which of those resource inputs were to be included in base student cost and which were to be funded in other ways. School employee salaries were included, for example, but fringe benefits were to be funded separately. The law also excludes spending on transportation, capital outlay, pilot programs, adult education, textbooks, and food service programs. These functions and programs, all of which were included implicitly or explicitly in the DMP, were to be funded with other state funds, local funds, or federal funds. With the exception of the South Carolina’s textbook and employee benefits exclusions, these exclusions are also found in other states. There is no universal rationale for these common exclusions from a state’s defined program except for transportation, where the financial need is affected more by geography and the number and sparsity of students than other factors.

Some states include transportation and employee fringe benefits in their defined programs (Table 6). Both are funded in South Carolina by separate state funding streams. Including some of these items in South Carolina’s base student cost would increase the level of base student cost, but because of the 70-30 average division of responsibility for funding base student cost between the school districts and the state, some of the funding obligation for those added components would be shifted to local districts. School construction in South Carolina is an entirely separate matter, with the cost falling mainly on the residents of the district rather than the state as a whole.

Table 6. Components of State School Funding Formulas, 2010-11

	Yes	No or Other
Foundation program	37	13
Per pupil weights	20	30
Weight for low income	37	13
Weight for English language learners	43	8
Weight for gifted and talented	33	17
Weight for career and technology educ.	28	22
Weight for sparsity (district-level)	32	18 (incl. SC)
State funding for transportation (a)	9	41 (incl. SC)
State funding for capital outlay and/or debt service	9	41 (incl. SC)

(a) South Carolina funds school pupil transportation, but not through formula funding. Source: Verstegen, 2014 and 2015.

In any state, the components of the foundation program and any exclusions in the funding formula in which base student cost is used should be reviewed periodically in order to respond to changing state and/or federal regulations as well as changes in teaching methods, especially technology-intensive teaching. Many other states with similar foundation program-based formulas have updated the

resource composition of base student cost in recent years, and some of them schedule such updates at regular intervals. Indiana, for example, reviews its funding formula every two years (Verstegen, 2015).

Some of the states that have re-examined the adequacy of their foundation programs over the past decade include: Illinois, Kentucky, Maine, Maryland, Montana, North Carolina, North Dakota, Ohio, Pennsylvania, Texas, Vermont, Wisconsin, and Wyoming.⁴ Such adjustments have not been made to the level and mix of resource inputs used to calculate the dollar value of South Carolina's base student cost in 1976. The only adjustment that has been made to base student cost since 1976 is inflation.

Toward an Updated Base Student Cost: The 2007 Recommended Adequacy Program

Although base student cost is adjusted annually for inflation in South Carolina, the state has not formally updated the resource inputs for base student cost, or their current costs, since 1976. The base student cost figure used today in South Carolina reflects staffing levels, teaching standards, curricula, and technology, equipment and materials (or lack thereof) employed 40 years ago. It is also unclear if non-wage costs such as facility operations and maintenance were included in that first \$665 per pupil figure. Nevertheless, the state has made progress toward an updated base student cost.

A more recent estimate of base student cost was developed for the South Carolina Department of Education in 2007 by a group of in-state professionals, including representatives of other state agencies and the business community.⁵ This group worked with an outside consulting firm that specializes in school finance studies.⁶ It had a broad charge to "...develop an education funding model to support world class learning" (SCDE 2007). Called the *Task Force on Funding for World Class Learning*, the group proposed recommendations in four broad policy areas (SCDE 2007, pp. 2-3):

- A. creating a standards-driven, contemporary educational program capable of promoting world-class learning;
- B. increasing efficiency and simplicity in education funding;
- C. replacing state-level mandates with flexibility, accountability, and intervention; and
- D. establishing a facilities funding model that is fair, equitable, and reliable and that provides the necessary funding for world-class education in all districts and for all children.

A re-evaluation of EFA base student cost was at the heart of the task force's work to develop a standards-driven, contemporary educational program for the state of South Carolina. The task force identified five crucial reforms (SCDE 2007, p. 3):

- 1) a modern defined program for elementary, middle, and high schools— described in this report as the "adequacy program"—that provides the resources and staff to meet the needs of every student, with

⁴ Two well-known consulting firms that conduct such statewide studies are Augenblick, Palaich and Associates (<http://apaconsulting.net/>) and Picus Odden & Associates (<http://picusodden.com/>). These and other studies can be found at their websites. There is also a large body of academic literature in this area, which is referenced in some of these studies (for example, see Picus Odden & Associates 2014).

⁵ The authors of this report provided technical support to a separate group, called the Task Force on Revenue.

⁶ Augenblick, Palaich and Associates.

- additional funding to meet the greater challenges of students and schools in poverty and other special circumstances (Appendix A);
- 2) effective early intervention via quality four-year-old programs for students in poverty;
 - 3) concentrated state support for school innovation and public school choice;
 - 4) effective incentives to bring good teachers and principals to low-income and rural schools; and
 - 5) more learning time for students.

The task force added more specific staff positions to the defined minimum adequacy program, especially at the district level. It adjusted the recommended number of personnel in various categories to more closely address current instructional and non-instructional needs. It also referenced new programmatic requirements expected to add to costs. Tables 7 and 8 list resource inputs the task force identified for a prototypical school district of 7,500 pupils, and a prototypical elementary school (500 pupils), middle school (750 pupils) and high school (900 pupils).

Table 7. School District: Recommended Adequacy Program 2007 (7,500 pupils)

1 Coordinator Guidance and programs for alcohol, drug abuse, mentoring, character ed.	
1 Coordinator School/Community Relations	
1 Coordinator Career Involvement/Development	
11 Secretaries	

Source: SCDE 2007, Appendix A

The task force used professional judgement and evidence-based research to identify the resource inputs required to enable the average student to meet accountability standards, stating that (SCDE 2007, p. 4):

The adequacy program we propose is based on national research regarding the resources schools need to achieve high standards, on the professional judgment of experienced and successful educators, and on current state policy as established in law, regulation, and funding.

Costed out, these updated resource inputs yielded an estimated base student cost of \$7,270 per pupil for 2007. The formula-driven base student cost for 2006-07 was \$2,484 per pupil, only a third of this level. In that year, base student cost was funded at an even lower level of \$2,367 per pupil. Unfortunately the 2007 report does not contain any detail about how costs were assigned to individual resource inputs, and the authors of this study were unable to locate anyone who had working files from

that period. To date, the results of the task force's effort to update EFA base student cost have not been adopted, and at this point, another decade has elapsed.

The 2007 effort on school finance reform has led to some notable changes, nonetheless. Legislation over the past decade has helped to realize some of the work of the task force, including revised per pupil weights for pupils in poverty and who are gifted and talented, and in the requirement for full day kindergarten for at-risk four-year-olds.

In 2015, officials from the South Carolina Department of Education compared the proposed 2007 adequacy program with current law and policy. They did not change any recommended staffing except for the addition of four-year-old kindergarten teachers and aides to the elementary school program.

Inflation and Base Student Cost

It is a common practice among states that use a foundation program similar to South Carolina's to adjust the base student cost for inflation. EFA base student cost per pupil was defined as \$665 in 1976. Today, inflation-adjusted base student cost is set at \$3,016 for 2017-18. A price index is used annually to increase the level of base student cost prior to budget deliberations on EFA appropriations. What is this price index and how well is it working?

Measures of Inflation

There are three possible candidates for the price index used to adjust EFA base student cost. One is the Gross Domestic Product (GDP) deflator for the state and local government sector, which is published by the U.S. Bureau of Economic Analysis. A second is the consumer price index (CPI), published by the U.S. Bureau of Labor Statistics. The third is a measure of changes to school employee salaries, because spending on personnel is a large part of school budgets.

The choice of an inflation index should favor that measure which most closely corresponds to the components of base student cost. The GDP deflator is a measure of the level of prices of all new, domestically produced, final goods and services in an economy, in this case the United States. The GDP deflator for the state and local government sector has been rising more rapidly than the CPI, especially since the late 1980s. A recent analysis indicates that this increase is driven primarily by construction costs and health care costs (Van Wychen 2016). Neither of these factors represent any of the components of base student cost in South Carolina, because fringe benefits are funded separately and base student cost does not include any capital spending.

The CPI is the most familiar and widely cited measure of inflation. It includes typical purchases of households across the income spectrum. The CPI is an imperfect measure of school non-wage price changes because it includes changes in the prices of goods that are a large part of household purchases but are excluded from South Carolina's base student cost, such as transportation and food. However, it is probably closer to representing the general increase in the cost of items purchased than the GDP deflator.

South Carolina's inflation measure for base student cost is a blend of average southeastern teacher wages and a non-wage factor reflecting other cost elements, such as supplies, equipment, technology, building maintenance and the like. The S.C. Revenue and Fiscal Affairs Office (RFA) calculates this price index annually. Every year during the state budget process, the annually adjusted base student cost per pupil provides one starting point for deliberations on the state's budget for public education.

The measure currently used in South Carolina to adjust base student cost is commonly referred to as average southeastern teacher salary, but it includes more than just teacher salaries. The index has two components. The first is an index of southeastern school employee wages for both teachers and non-teachers (administrators and instructional and non-instructional support staff). Annual average wages are computed from a survey of Employment Security Commission offices in southeastern states by the RFA. The wage data collected is public school employee wage data reported for the workman's compensation program. For example, in the average southeastern school employee wage was \$20,026 in 1989-90. For 2017-18, the average wage was estimated to be \$41,970, an increase of 110 percent. Average wages make up 88 percent of the inflation index used for base student cost (Table 9).

Relying on the increase in school employee wages alone as an inflation factor may not adequately account for changes in non-wage costs. Over the past 40 years, for example, spending on technology and related equipment has gone from copiers and projectors to computers, software and a range of related technology for both teachers and students. For this reason the South Carolina index also includes a non-wage component, which makes up 12 percent of the composite index for base student cost. The CPI has been used as the non-wage index since 1997-98. Between 1989-90 and 1996-97, the state and local government implicit price deflator for Gross Domestic Product was used.

Figure 3 shows how the southeastern wage index, the CPI and the GDP price deflator compared over time. Because construction and fringe benefits—including health insurance—are not components of base student cost, the GDP deflator would overstate the growth in actual cost after accounting for inflation. For this reason we conclude that the CPI is an appropriate choice of inflation measure for the non-wage component of South Carolina’s composite index.

Figure 3. Inflation measures for base student cost

Weighting the Components of the Composite Inflation Index for Base Student Cost

Next, we considered the weights in the formula for the composite inflation index. Since 1989-90, the southeastern annual average wage has comprised 88 percent of the index, and the CPI (GDP deflator prior to 1989-90) the remaining 12 percent. Did these weights reflect the current balance of school spending between personnel and other items in base student cost?

To evaluate the weights in the composite inflation index, we estimated the current level of school district spending on instructional and non-instructional programs using state and local funds⁷. Spending on transportation, debt service, capital outlays, and food was excluded. These exclusions are all large spending areas that EFA funds may not be used to support. (Employee benefits were retained in the equation because they are part of personnel costs.) We used detailed expenditure data by function and object and including district and fund type,⁸ obtained from SCDE for 2015-16.

Table 9. Base Student Cost Inflation Index (1989-90=100 for all indexes)

Fiscal Year	Average SE Wage	Non-Wage Index (CPI)*	Average SE Wage Index*	SC Composite Index*	Base Student Cost
1989-90	\$20,026	100.0	100.0	100.0	\$1,467
1990-91	21,023	101.0	105.0	104.5	1,533
1991-92	21,226	101.1	106.0	105.4	1,546

2006-07	34,627	142.8	172.9	169.3	2,484
2007-08	36,176	146.5	180.6	176.5	2,590
2008-09	36,855	151.9	184.0	180.2	2,643
2009-10	36,813	154.0	183.8	180.3	2,644
2010-11	37,075	155.6	185.1	181.6	2,664
2011-12	36,923	158.7	184.4	181.3	2,660
2012-13	37,277	163.3	186.1	183.4	2,690
2013-14	37,842	166.1	189.0	186.2	2,732
2014-15	38,777	168.7	193.6	190.6	2,796
2015-16	39,549	169.9	198.1	194.7	2,856
2016-17	40,340	171.1	202.6	198.8	2,917
2017-18 (a)	41,147	174.2	205.5	201.7	2,959
2018-19 (a)	41,970	177.7	209.6	205.7	3,018

* All indices recomputed to 1989-90=100 values. (a) Estimated. Source: SC Revenue and Fiscal Affairs Office, EFA Factor Computation, 8/28/2017, <http://rfa.sc.gov/econ/educ>.

⁷ EFA, EIA and other general state appropriations included. Federal and other restricted revenue accounts excluded.

⁸ Expenditure functions are activities or program areas, such as “Kindergarten Programs” or “Attendance and Social Work Services.” Objects describe the type of expenditure, such as “Salaries,” “Employee Benefits” and “Purchased Services.”

Table 10 shows that spending on non-wage items was 15 percent of the total in 2015-16, up from the 12 percent non-wage share that has been used since 1989-90. The wage share decreased from 88 percent in the 1980s to 85 percent in 2015-16. Spending examined here is from school district general funds, which include EFA appropriations, other state revenue appropriations, and revenue from local sources.

Table 10. School Wage and Non-Wage Spending

	2015-16
General/EIA spending (salary & benefits <i>included</i>)	\$6,019 million
General/EIA spending (salary & benefits <i>excluded</i>)	\$871 million
Wage share	85%
Non-wage share	15%

Source: SCDE, School District Expenditures 2015-16.

These current wage and non-wage shares of school spending modify the BSC composite index weightings as follows:

- Weight the non-wage price index (CPI) by the non-wage share of spending in the program areas most closely aligned with the EFA and base student cost.
- Weight the southeastern average teacher wage index by (1 LESS non-wage weight).
- Both indexes first must be normalized to 1989-90 = 100 to maintain consistency with historical base student cost inflation factors.

For 2017-18, using these revised weights would have resulted in a base student cost adjustment factor of:

$$[(0.85) * (\text{Wage Index})] + [(0.15) * (\text{Non-Wage Index})] = \text{Revised Composite Index} = 200.8.$$

The revised composite index of 200.8 is slightly lower than the current index of 201.7 for 2017-18 (Table 11).

Table 11. Current and Revised Composite Index for Base Student Cost

	Current	Revised
SE Avg. Teacher Wage Index, 2017-18	205.5	205.5
Wage Index Weight	88%	85%
Non-Wage Index (CPI)	174.2	174.2
Non-Wage Index Weight	12%	15%
Composite Index	201.7	200.8

Source: SC Revenue and Fiscal Affairs Office, "EFA Factor Computation," 8/28/2017 and author's calculations.

The authors recommend that the SC Department of Education and the SC Revenue and Fiscal Affairs Office monitor wage and non-wage shares of school spending and consider modifying future BSC inflation index weightings to reflect those shares. The authors also recommend reviewing index wage and non-wage weightings at least once every 10 years.

Formula vs. Funded Base Student Cost

State law requires that the base student cost inflation adjustment be computed annually and provided to the General Assembly. In some years the legislature has made the full inflation adjustment, while in other years the adjustment has been less than the index or sometimes even negative. Appendix A and Figure 4 compares the indexed value of base student cost to the level of base student cost actually funded by the General Assembly from 1989-90 to 2017-18. When mid-year budget cuts are included, base student cost has only been fully funded (*i.e.*, adjusted for inflation according to the EFA formula) in three of the past 28 years.

Figure 4. Base student cost: formula vs. funded

Costing Out the 2007 Recommended Adequacy Program

For this report the Department of Education requested that we calculate a current value for the 2007 recommended (but not formally adopted) adequacy program while adhering as closely as possible to the original intent of the Education Finance Act. That meant including only the costs for allowed positions, programs and equipment and materials. At a broad level, that meant excluding the cost of school and district employee benefits, transportation of students, adult education, capital outlays, textbooks, pilot programs, and food service programs.

To generate an updated base student cost from current data, we used a two part methodology. First, we estimated the cost of personnel included in the 2007 adequacy program. Second, we estimated the non-wage costs of providing public education, which include instructional materials, computers and technology equipment, and facility operation and maintenance, among others.

The Cost of Personnel

In South Carolina and other states, much of the cost of providing a foundation education program is associated with personnel: wages, salaries and employee benefits. Because South Carolina excludes employee benefits from base student cost, we looked to employee salaries alone to give provide an estimate of the average cost of personnel in the 2007 adequacy program for a prototypical school district and prototypical elementary, middle, and high schools.

Data used for this analysis was provided by the South Carolina Department of Education from its Professional Certified Staff (PCS) system for 2015-16. The PCS system is used to track personnel employment characteristics such as years of experience, academic achievement, and certifications that teachers maintain as a condition of employment or are linked to salary increases, such as the certification by the National Board for Professional Teaching Standards. Data from the PCS system also aids in the preparation of various state and federal accountability reports.

There are 99 different position codes in the PCS and they cover both instructional and non-instructional staff and administrators. We compared PCS position descriptions with positions in the revised defined program and identified the best match. In many cases, the choice was unambiguous, such as with district superintendents, principals, assistant principals, classroom teachers and so on. Every district and school fills such positions so there were lots of individual salaries available to calculate an overall average salary for each position. But for some positions there were relatively few salaries available. In such cases we substituted the average salary of a similar position for which there were more observations.

Calculating average salaries using the PCS dataset presented two specific challenges. First, some employees work in two or more different positions. Their salary does not differ by position, but it was necessary to apportion FTEs and salary based on the time spent in each position. Second, in any given year a number of teachers across the state change their status in the PCS database by completing graduate course credit or a graduate degree. The PCS database contains two records for each of these employees: one record for the previous educational level and one for the new level. To ensure that we did not double-count these employees we excluded one of the salary records from this analysis.

Table 12 lists the number of full-time equivalent employees (FTEs) and average salaries for 12 positions in 2015-16, among other information. These 12 positions comprised almost three-quarters of school FTEs in South Carolina in 2015-16. Appendix B contains the same information for nearly 100 PCS position codes.

In most cases we retained the 2007 task force's recommendations for the number of FTEs per position for the prototypical school district and school plants. When it was necessary to approximate a staffing level we used the average number of FTEs per 1,000 pupils as a starting point. This figure was readily available using known staffing levels in the 2015-16 PCS database (Table 13).

For example, the 2007 adequacy program called for speech therapists at the district level but recommended staffing levels were not specified. Using measured statewide staffing levels of 1.22 speech therapists per 1,000 pupils for this position, we generated an estimate of staffing levels for the prototypical school district of 7,500 pupils.

Special education provides another example. At the school level, special education was included as a program requirement, but it was not clear if special education teachers were included in the 2007 adequacy program's classroom teacher total. When we attempted to replicate the teacher counts, special education teachers did not appear to be included in the classroom teacher total. For this reason we estimated the number of special education teachers and aides using the same process.

We also had to estimate the number of teachers and aides for four-year-old kindergarten, which SCDE requested be added to the 2007 adequacy program for this project. Because the 4K program only applies to one grade level, we estimated the number of pupils enrolled in 4K based on school size and 50 percent of 5K enrollment.⁹ Some of the estimated FTEs in Table 14 were rounded for use in the prototypical school staffing levels used to calculate an updated base student cost for South Carolina.

Table 12. Professional Certified Staff (selected), Average Salaries 2015-16

PCS Position Title	PCS Code	Total Salary (millions)	Employees (FTE)	Average Salary	FTEs Per 1,000 Pupils
Principal	1	\$109.2	1,212	\$90,126	1.60

Special Education Program	Special Education Aide	4.73	--	2.5 (a)

(a) Calculated FTE rounded up/down for use in district and school personnel cost estimates.

⁹ We assumed that not all parents would choose to have their children attend 4K public school programs. Currently, school districts must offer 4K to at-risk children.

Per pupil personnel costs for a hypothetical school district and an elementary, middle, and high school were estimated by adding up the anticipated salary outlay and dividing by the number of pupils served.¹⁰ Estimated personnel costs for the 2007 adequacy program are shown in Tables 14 through 17.

Table 14. Estimated Base Student Cost for Wages and Salaries, 2015-16
7,500 Pupil School District

Position	FTEs	Average Salary	Total Salary (Avg * FTEs)
District Superintendent	1.0	\$133,561	\$133,561

Total Personnel Cost	39.0	--	\$2,143,816
Personnel Cost = \$292 per pupil			

(a) Positions added in this study. All other positions at 2007 recommended level.

(b) Recommended but excluded by law from inclusion in base student cost.

(c) Salaries of instructional personnel increased by 2.63% (5 contract days).

(d) Personnel costs for this area estimated with non-wage costs.

The Education Finance Act of 1977 set base student cost at \$665 per pupil and defined the base student to be “that student classification that represents the most economically educated pupil in the school system, those in grades four through eight in regular classroom settings” (SC Code of Laws Section 59-20-20(6)). Forty years later, our analysis shows that the high school student is now the least costly student to educate, at least in those academic areas supported with EFA funding.

¹⁰ Pupils schooled in special districts such as the Department of Corrections, Department of Juvenile Justice were excluded from the pupil count.

Table 15. Average Cost per Pupil for Wages and Salaries, 2015-16
Elementary School (500 pupils)

Total	61.4	--	\$2,725,457
Personnel cost = \$5,451 per pupil			

(a) 5K through Grade 3 teachers @ 15:1 pupil-teacher ratio, Grades 4 and 5 @ 24:1. Specialist teachers in world language, physical education, art and music included.

(b) Positions added in this study. All other positions at 2007 recommended levels.

(c) Salaries of instructional personnel increased by 2.63% (5 contract days).

(d) Personnel costs for this area estimated with non-wage costs.

Non-Wage Costs

Schools and school districts incur non-wage costs in addition to personnel costs. Non-wage costs common to schools across the country include those for instructional materials, libraries, computers and related technology, career and technical education equipment and materials, and facility operations and maintenance. This section develops non-wage cost estimates for use in an updated South Carolina base student cost.

Instructional Materials and Library Resources

School instructional materials include textbooks, other instructional supplies, library books, and other electronic library and classroom media. The cost of these materials does not vary from state to state, so cost estimates developed in other states can be used in South Carolina. Educational consultants Picus Odden & Associates developed recent evidence-based estimates of the per pupil costs of instructional materials for Kentucky, North Dakota and Maryland (Table 18).

Table 16. Average Cost per Pupil for Wages and Salaries, 2015-16
Middle School (750 pupils)

Position	FTEs	Average Salary	Total Salary (Avg * FTEs)

(c) Salaries of instructional personnel increased by 2.63% (5 contract days).

(d) Personnel costs for this area estimated with non-wage costs.

Table 18. Cost of Instructional Materials per Pupil in Selected States

State	Category	District	Elem.	Middle	High
Maryland (a)	Library books & electronic media	\$25	--	--	--
	Textbooks & instructional materials	\$135	--	--	--
North Dakota (b)	Library & electronic media	--	\$20	\$20	\$25
	Textbooks	--	\$60	\$70	\$100
	Consumables	--	\$60	\$50	\$50
Kentucky (c)	Library & electronic media	--	--	--	--
	Textbooks	--	\$60	\$70	\$100
	Consumables	--	\$60	\$50	\$50

(a) Odden and Picus 2016, pp. 45-47

(b) Odden, Picus and Goetz 2014, pp. 69-70.

(c) Goetz et al. 2014, pp. 89-91.

For Maryland, the statewide estimate for instructional materials was \$160 per pupil, which included \$25 per pupil for library books and electronic library resources and \$135 per pupil for textbooks and other instructional materials. The Kentucky and North Dakota studies estimated the cost of instructional materials by school type, citing the high cost of textbooks, especially at the high school level. Both studies used the same costs per pupil for textbooks and consumables and pedagogical aids, but the Kentucky study did not include a separate estimate for library books and resources.

In South Carolina, the EFA specifically excludes funding for textbooks from base student cost, although the costs of library books and other instructional materials are allowed. For an estimated cost of instructional materials per pupil in South Carolina we combined the Maryland estimate for library resources with the Kentucky and North Dakota estimates for other instructional materials and consumables (Table 19).

Table 19. Estimated Cost of Instructional Materials per Pupil in South Carolina, 2015-16

	Elem.	Middle	High
Library books & electronic media	\$25	\$25	\$25
Other instructional materials	\$60	\$50	\$50
Total	\$85	\$75	\$75

These estimates are higher than the costs included in South Carolina's Defined Minimum Program from the 1970s, even after adjusting for inflation. The DMP includes required minimum annual per pupil spending on library books, instructional supplies and media of \$12 per pupil for elementary and middle schools, and approximately \$10 per pupil for high schools, depending on enrollment (SCDE 1986, pp. 31, 46 and 75). Textbooks are not listed by name in the DMP. Forty years later and after adjusting for inflation using the CPI, these amounts would be \$52 per pupil and \$42 per pupil, respectively.

	Elementary	Middle	High
Instructional Materials per pupil	\$85	\$75	\$75

South Carolina's current DMP, which is part of SCDE's regulations, does not specify a minimum level of spending on instructional materials. Instead, it states more generally that "Library media programs and

technology resources are required and accessible to all students and staff and are appropriate to achieve the strategies and goals in each school renewal or district strategic plan.”¹¹

Computers, Technology and Related Equipment

The teaching profession’s use of technology has been totally revamped over the past 40 years. Typewriters, mimeograph machines, and overhead projectors have been replaced by personal computers and tablets, enterprise-level file servers, digital video recorders and projectors, multi-function copiers, and a host of associated instructional and non-instructional software products and equipment. As with instructional materials, the cost of computers and related technology does not vary from state to state. This study examined two different state estimates of the per pupil costs of technology for use in updating base student cost in South Carolina.

First, Picus Odden & Associates use an estimate of \$250 per pupil across all school types for the cost of computers, technology and related equipment in their recent work estimating the cost of state foundation programs in Kentucky, Maryland and North Dakota. This figure is based on earlier empirical work that established 2012 per pupil costs in four areas (Odden and Picus 2016, p. 51):

- Computer hardware (\$71),
- Operating systems, productivity, and non-instructional software (\$72),
- Network equipment, printers and copiers (\$55), and
- Instructional software and additional classroom hardware (\$52).

These technology costs were based on mid-priced equipment, with all teachers, administrators and other support staff having individual computers, and with one computer for every three to four students.

Second, we considered work by Augenblick, Palaich and Associates (Silverstein et al. 2007), which estimated the cost of technology per pupil for very large school districts in Montana¹² at \$215 per pupil for elementary and middle schools and \$159 per pupil for high schools. Adjusted for inflation using the CPI, these figures today would be \$249, \$249 and \$184 per pupil, respectively.

Computers, Technology, and Related Equipment	\$250 per pupil
--	-----------------

Based on the two estimates considered, we chose \$250 per pupil as an estimate of the cost of technology in an updated base student cost for South Carolina. For the South Carolina estimate we did not increase this 2012 figure for inflation because prices for computers and technology continue to decline and there is more technology available at lower price points than there was five or more years ago when the \$250 per pupil was costed out. In their Maryland costing out study, Odden and Picus (2016, p. 52) observed that with more recent lower entry level costs for tablets, retaining the \$250 per pupil funding level would likely allow districts to continue to lower their student-to-computer ratios.

¹¹ South Carolina Department of Education. State Board Regulations 43-231, 43-232 and 43-234.

¹² Greater than 3,000 pupils.

Facility Operations and Maintenance (O&M)

The ongoing costs to operate and maintain school district facilities and grounds are a large share non-wage school district costs. School facility O&M requires both staffing and supplies in three areas. First, custodians handle facility cleaning and room setup as well as minor repairs in school buildings. Maintenance workers handle specialized equipment and facility maintenance and repair work, such as HVAC systems, electrical and plumbing systems, kitchen equipment, and carpentry. Maintenance staff is located at the district level and dispatched to other facilities on an as-needed basis. Groundskeepers handle landscape and outdoor athletic field maintenance. The cost of utilities, including fuel, electricity, solid waste disposal and water and sewer are also part of the cost of school facility operations. Costs discussed in this section only include regular, ongoing costs of facility O&M. Construction of new facilities or extensive renovation of existing facilities funded by bonded indebtedness is excluded from this analysis.

The costs of facility O&M are subject to much more variation between states—and even within states—than other non-wage costs. For example, older buildings with thinner insulation and older HVAC equipment will likely cost more to heat and cool than newer buildings with higher efficiency equipment. Older buildings also may require more regular maintenance than newer ones. Regional climate variations and the cost of energy also affect facility operations and maintenance costs between and within states. For these reasons, it is preferable to use recent actual costs for facility O&M rather than formulas when building per pupil cost estimates.

For this study we estimated the per pupil cost of school facility O&M using actual spending by regular South Carolina school districts in 2015-16.¹³ Table 20 shows total expenditures on school plant operation and maintenance from the General Fund, which includes both state appropriations and local revenue, as well as in the EIA Special Revenue Fund. From this total we removed EFA exclusions from base student cost such as employee benefits and capital projects. To calculate the average cost per pupil we divided total allowable costs in 2015-16 by the number of pupils in average daily membership in that year. The average cost per pupil for school district facility O&M in South Carolina was \$846 per pupil in 2015-16.

Table 20. South Carolina School District Expenditures on
School Plant O & M, 2015-16

	General Fund (millions)	EIA Fund (millions)
Salaries for district employees (benefits	\$189.2	\$0.046
Water and sewer	\$34.7	\$0.000
Other purchased services (a)	\$168.7	\$0.376
Energy (electric, natural gas, gasoline, etc.)	\$155.8	\$0.010
Other supplies & materials	\$57.3	\$0.029
Total	\$605.7	\$0.490
Combined General Fund and EIA Fund	\$606.2	
135-day Average Daily Membership	716,361	
Average facility O&M cost per pupil	\$846	

Source: SCDE Finance Office, 2017.

(a) Includes waste mgmt. and contracts with outside firms for facility maintenance or repair.

¹³ Special school districts are not included. These are the statewide public charter school districts, the Deaf and Blind School, and schools operated by the Department of Corrections and the Department of Juvenile Justice.

Facility Operations and Maintenance	\$846 per pupil
-------------------------------------	-----------------

Other Non-Wage Costs

Recent costing-out studies in other states include four other areas of non-wage costs in base student cost:

- short cycle (formative) assessments,
- other district-level costs,
- career and technology education, and
- non-instructional pupil activities.

Short cycle assessments. Short cycle, or formative, assessments are mid-year assessments that give teachers feedback on how students are learning. Such formal and informal feedback lets teachers adjust their teaching prior to more lengthy and in-depth year-end assessments. In Maryland, North Dakota, and Kentucky, Picus Odden & Associates used estimates of \$25 per pupil or \$30 per pupil for short cycle assessments. For South Carolina we use the most recent estimate, which is \$25 per pupil (Odden and Picus 2016). Neither short cycle assessments nor end-of-year assessments were included as a separate component of base student cost in South Carolina’s 2007 adequacy program.

Other district costs. This category includes the costs for board of trustees support and expenses, insurance, legal and audit services, association fees, and the like. Odden and Picus (2016) estimated these costs at \$300 per pupil for Maryland, which is the estimate we use for South Carolina. An explicit estimate for these costs was not identified in the 2007 adequacy program.

Career and technology education. CATE, formerly referred to as vocational education, has long been provided by South Carolina schools. Vocational education is included in South Carolina’s DMP from the 1970s. CATE also is an allowed component of base student cost.

CATE programs can come with high costs for certain equipment, which requires specialized maintenance and repair. Odden and Picus (2016, p. 92) used evidence-based research and professional judgement panels to develop an annual cost estimate for CATE equipment and materials of \$10,000 per teacher. This cost is not included in the updated base student cost developed in this report because we were not able to separate CATE teachers from other classroom teachers.¹⁴ Nor does the 2007 recommended adequacy program distinguish CATE teachers from other classroom teachers. We recommend, however, that SCDE consider CATE equipment costs in any future costing-out studies.

Non-instructional pupil activities. Other state costing-out studies include the costs of non-instructional pupil activities such as athletics and clubs, in base student cost. Such costs are not included in the South Carolina estimate.

Short Cycle Assessments	\$25 per pupil
Other District-Level Costs	\$300 per pupil

¹⁴ The Professional Certified Staff System used to estimate school wage costs per pupil identifies CATE administrators (directors and assistant directors) but does not identify CATE teachers separately from classroom teachers.

Summary of Non-Wage Costs

Updated base student cost for South Carolina assigns facility O&M and other district costs to the district level, with the remaining non-wage costs apportioned to the three hypothetical schools (Table 21).

Table 21. Estimated South Carolina Non-Wage Costs per Pupil

	District	Elementary	Middle	High
Instructional materials and library		\$85	\$75	\$75
Computers, technology and related equipmt.		\$250	\$250	\$250
Facility operations and maintenance	\$846			
Short cycle assessments		\$25	\$25	\$25
Other district-level costs	\$300			
Total cost per pupil	\$1,146	\$360	\$350	\$350

An Updated Base Student Cost for Education Finance in South Carolina

The updated base student cost figure for South Carolina is \$6,561 per pupil. It is based on 2015-16 salaries and outlays and it was estimated using staffing levels necessary to support current programs, plus estimates of non-wage costs that are consistent with levels in other states or that directly reflect current outlays. South Carolina's formula-driven base student cost was 44 percent of the updated base student cost of \$6,561. Funded base student cost in 2015-16 was only 33 percent of the new level. Table 22 shows the numbers used to calculate an updated base student cost for South Carolina.

Updated BSC, 2015-16	\$6,561 per pupil
Formula BSC, 2015-16	\$2,865 per pupil
Funded BSC, 2015-16	\$2,197 per pupil

Table 22. Estimated South Carolina Base Student Cost per Pupil, 2015-16

Type of Cost	District (7,500 pupil)	Elementary (500 pupil)	Middle (750 pupil)	High (900 pupil)
<i>Personnel (wage) cost per pupil</i>	\$292	\$5,451	\$4,322	\$4,002
Average daily membership (regular districts)		343,004	163,067	210,291
ADM % of total		47.9%	22.8%	29.4%
Weighted wage cost per pupil		\$2,610	\$984	\$1,175
Sum of weighted wage cost per pupil (schools)	\$4,769			
<i>Non-wage cost per pupil</i>		\$360	\$350	\$350
ADM % of total		47.9%	22.8%	29.4%
Weighted non-wage cost per pupil		\$172	\$80	\$103
Sum of weighted non-wage cost per pupil	\$355			
Facility O&M cost per pupil	\$1,146			
Total base student cost (a)	\$6,561			

(a) Detail may not sum to totals due to rounding.

Estimating Statewide Base Student Cost

We used the following approach to estimate statewide base student cost from costs for prototypical schools and school districts. See Table 23 for cost components and results.

- A. MULTIPLY wage costs per pupil for the prototypical elementary, middle and high school by the share of the 2015-16 average daily membership in those grades. These numbers are each type of school's share of estimated wage costs per pupil.
- B. ADD TOGETHER the numbers in (A) to get total personnel wage cost per pupil for school plants = \$4,769.
- C. MULTIPLY non-wage costs per pupil for the prototypical elementary, middle and high school by the share of the 2015-16 average daily membership in those grades. These numbers are each type of school's share of estimated non-wage costs per pupil.
- D. ADD TOGETHER the number in (C) to get total non-wage cost per pupil for school plants = \$355.
- E. ADD TOGETHER:
 - B (school wage cost per pupil)
 - + D (school non-wage cost per pupil)
 - + District office wage cost per pupil
 - + District office non-wage cost per pupil
 - + District office O&M cost per pupil
 - = Average base student cost
 - = \$6,561.

Applying the current EFA inflation factor to the updated base student cost for 2015-16 provides estimates for 2016-17 and 2017-18 of \$6,686 and \$6,819 per pupil, respectively. Appropriated base student cost in those two years was about 35 percent of the updated levels.

Updated BSC, 2015-16		\$6,561 per pupil
Updated BSC, 2016-17	1.9% EFA Inflation Factor	\$6,686 per pupil
Updated BSC, 2017-18	2.0% EFA Inflation Factor	\$6,819 per pupil

Updated Base Student Cost and School District Funding

How would an updated base student cost of \$6,561 per pupil have changed state funding to school districts in 2015-16? A lot! Table 23 compares the EFA total state and local foundation formula funding to school districts from the two different base student cost figures in 2015-16. State EFA funding to school districts would increase by nearly \$3.0 billion to \$4.45 billion, which is more than the \$4.0 billion school districts received in state funding from all sources in 2015-16. State funds include EFA, EIA, lottery, grants and reimbursement for homeowner property tax relief (Table 1).¹⁵

¹⁵ EFA funding totals in Table 24 are slightly different than those in Table 1 because special districts are excluded from the Table 24 totals.

The increase in EFA local required support resulting from the updated base student cost may be less problematic for individual school districts than would appear at first glance. In 2015-16, only 11.5 percent of local revenue (\$638 million) raised by South Carolina school districts was used as EFA local required support. In that year school districts raised \$5.56 billion in local revenue. School districts' local required support would increase by nearly \$1.3 billion to \$1.91 billion, well below the current level. With an updated base student cost fully supporting the state's foundation education program, local funds currently used to supplement EFA and EIA funded personnel and programs may be sufficient to cover a higher level of EFA local required support.

Table 23. Comparison of Current and Updated Base Student Cost, 2015-16

	Funded BSC 2015-16	Updated BSC for 2015-16	Difference
Base Student Cost	\$2,197	\$6,561	\$4,364
Statewide WPU's	968,244	968,244	0
Total EFA (WPU*BSC)	\$2,127,232,925	\$6,352,651,443	\$4,225,418,518
% State (Total EFA*0.7)	\$1,489,063,047	\$4,446,856,010	\$2,957,792,963
% Local (Total EFA*0.3)	\$638,169,877	\$1,905,795,433	\$1,267,625,555

Source: SCDE, Office of Finance, *EFA Financial Requirements Report, FY 2015-16 135 Day Report* and author's calculations.

Table 24 and Appendices C, D, and E show how an updated base student cost of \$6,561 per pupil would have changed state EFA funding received by individual South Carolina school districts and those districts' EFA local required support in that same year. These funding estimates were generated using the EFA foundation funding formula and district indexes of taxpaying ability and weighted pupil units. Because district ITAs and WPU's remain unchanged, districts would receive the same percentage share of state EFA funding, although the dollar amount would be higher because of the higher base student cost.

Because the staffing levels that comprise updated base student cost cover some instructional activity currently funded by other state revenue streams such as the EIA and by local revenue, the authors recognize that adoption of an updated base student cost would almost certainly take place within a larger discussion of state education finance reform.

Updated Base Student Cost and School Funding Adequacy and Equity

An updated EFA base student cost that makes up a larger share of total state revenue to school districts would improve equity in state funding among districts with widely differing abilities to raise revenue from their local property tax bases.

Thirty-four current and mostly poor and rural school districts were original plaintiffs in the long-running school funding adequacy case in South Carolina, *Abbeville County School District, et al. v. State of South Carolina, et al.*¹⁶ Table 24 lists the top one-third of districts (27 of 81) receiving the largest dollar increases in state EFA funding per *unweighted* pupil in 2015-16 if base student cost had been increased from its funded level of \$2,197 per weighted pupil to this report's \$6,561 per weighted pupil. Twenty-three of these 27 districts, or 85 percent, are *Abbeville* plaintiff districts. Appendices D and E contains rankings for all districts. We used funding per unweighted pupil because funding per pupil is a common comparison between districts and because other state and federal funds are distributed in this manner.

¹⁶ The South Carolina Supreme Court dismissed the case on November 17, 2017, after 24 years.

Conclusion

After 40 years it is past time for the state to re-evaluate and recalibrate base student cost, the foundation of the Education Finance Act of 1977's foundation education funding formula. In 2015-16 the EFA distributed 38 percent of state aid to South Carolina school districts using an equalizing formula that gives more funding per pupil to poor districts and less to wealthier districts. With the expansion of state-funded homeowner property tax relief the equalizing effect of EFA foundation funding has diminished over the past 25 years, however. And while EFA base student cost has been adjusted annually for inflation, base student cost remains based on educational standards from the 1970s, not current program, staffing and equipment requirements.

This study provides the South Carolina Department of Education an updated base student cost figure of \$6,561 per pupil. This figure is based on 2015-16 South Carolina school district salaries and outlays and was estimated using staffing levels necessary to support current programs, plus estimates of non-wage costs that are consistent with levels in other states or that directly reflect current outlays. South Carolina's formula-driven base student cost of \$2,856 per pupil was 44 percent of the updated base

student cost of \$6,561 per pupil. Funded base student cost of \$2,197 per pupil was only 33 percent of the updated amount. In the current fiscal year (2017-18), base student cost would be \$6,819 per pupil after applying the EFA annual inflation factor.

This study demonstrates that it is possible to recalibrate base student cost at a moderate cost given access to three pieces of information: 1) detailed list of resource inputs for a currently defined adequacy program at the district and school plant level, 2) detailed school district salary and expenditure data from the SCDE, and 3) estimates of the cost of various resource inputs per pupil in South Carolina or other states.

This study provides several actionable findings.

1. The definition of base student cost needs to be regularly updated in terms of its resource inputs as well as the changing price level. Regular updates of base student cost to reflect current education standards and costs is essential to fulfilling the intent of the EFA.
2. The state may wish to reconsider the share of EFA in its total funding package by adjusting the figure used for base student cost in the EFA formula closer to the most recent inflation-adjusted estimate.
3. The inflation index combining average southeastern school district employee salaries with the Consumer Price Index is an appropriate choice. However, the annual inflation adjustment of base student cost should be an 85/15 percent division between wages and non-wage costs rather than the current 88/12 percent division estimated in our study, a figure which should be reviewed periodically and adjusted as needed.
4. South Carolina should consider the experience of other states in making some limited adjustment for poverty and sparsity at the district level in the EFA funding formula.
5. The index of taxpaying ability, which is part of the EFA funding formula, should be reconsidered in the light of changes to other education funding and changes made in other states that make required local effort simpler to calculate and explain.
6. An updated EFA base student cost that makes up a larger share of total state revenue to school districts would improve equity in state funding among districts with widely differing abilities to raise revenue from their local property tax bases. Of the 27 districts in the top third of districts that would have received the largest dollar increases in state EFA funding per (unweighted) pupil in the 2015-16 example in this report, fully 23 districts, or 85 percent, were initial plaintiff districts in the state's long-running school finance adequacy case, *Abbeville County School District, et al. v. State of South Carolina, et al.*

The Education Finance Act is an important tool for ensuring adequacy and equity in South Carolina's public education funding so that our children will be prepared to be productive workers, informed citizens, and knowledgeable consumers in the 21st century. Just as we update our children's textbooks, their technology, and their curricula, the state needs to also commit to a regular review and update of the way in which public education is funded.
