PROVIDE A SUMMARY OF THE RESEARCH STUDY

Provide a description of all of the following elements in your summary; provide the information in the following order.

1. type of design: experimental or quasi-experimental
2. time period during which the study will be conducted
3. the population of interest
4. the districts, schools, & number of classrooms included in the study
5. the sampling method and the size of the sample
6. the dependent and the independent variables (constructs being measured)
7. statistical techniques to be used
8. data analyses to be conducted
9. anticipated results of the study
10. describe the way(s) the assessment will be used to inform instruction.
11. describe the most recent field test study conducted for this product (see question below)
12. describe norming studies that have been conducted for this assessment

Adoption List of Formative (Interim) Assessments – Request to Conduct a Study

Use the following information as a guideline for responding to element 11:

As the assessment is currently administered, describe in detail the most current field testing of the assessment forms that have been conducted with this product including the procedures used to select the sample(s) of test takers as well as the resulting characteristics of the sample(s). The sample(s) should be as representative of the population(s) for which the test is intended.

As the assessment is currently administered, describe the procedures used to construct scales for reporting scores and the rationale for these procedures. If raw scores are used, they should be described and justified in the same manner as is done for scale scores. The rationale for the recommended score interpretations should be explained.
